

What is Raum Network

Raum Network, a web3.0 based Object Storage Solution for large enterprise and individual end-users. The contract is completely stored in blockchain, thus making it auditable and transparent for the end-users. Decentralisation also reduces the dependency on the third party, decreasing the risk of failure. Raum Network provides the extreme functionality of assigning roles as per the hierarchy. The complete roles mapping is managed on the basis of public address (what we call, Digital Signature). This means every enterprise can manage the roles (For example, read-only access or read-write access) as per the requirements.

Raum Network on Polygon

The Raum Network opted for Polygon as its inaugural project to launch on the platform. Polygon makes it easy to use the token for staking and delegation and is built to meet and develop the rigorous many standards such as zero-knowledge proof for network and tokens. Credentials utilised on Raum Network will be maintained or managed using zero-knowledge consensus.

Token Details (At Genesis)

Ticker: RN

Standard: ERC-20

Max Supply: 500,000,000 RN

Total Supply: 300,000,000 RN
(At Genesis)

Est. Network issuance: 5.7%*
(From year 1 until year 7)

Initial Circular Supply: 250,000,000 RN

Public Launch Allocation: 50,000,000 RN

Public Launch price: \$0.14

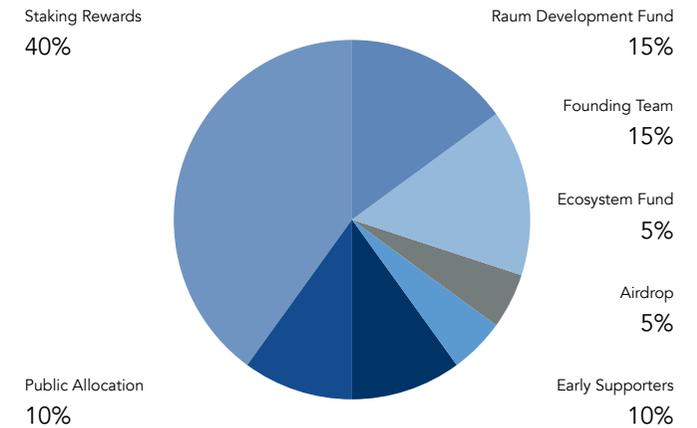

Raum Network Token Economics

Token Overview

The Raum Network token (RN) is a hybrid use token that represents the right to use in the network as a user, stake as a delegator, or access a share of its resources by renting Elastic storage node for some time as an end-user. Users pay RN tokens in a subscription-based model to rent these resources (storage, bandwidth) for a predetermined amount of time. Users can stake RN tokens into the network and then gain the right to run storage nodes and earn both fees and tokens via inflation. Every quarter, there will be a buyback of RN tokens and will be burnt to create a deflationary model to maintain network value and stability.

Token Distribution (based on Max Supply)

Token Lock Up Schedule

Tokens awarded to Raum Network supporters in early (pre-public) rounds are not liquid upon launch. To ensure network security and stability, these tokens can be staked. All staked tokens will earn standard delegation rewards.

Round	Allocations <small>(Early Supporters + Public Allocation)</small>	Token Price <small>(1 RN)</small>	Delegation Rewards <small>(Months Post Launch)</small>
Round 1	Early supporters purchased the right to support the network via an agreement for future tokens upon network launch.	0.029 MATIC	10% of contribution
Round 2	Prices vary based on time of investment. Lower prices are balanced with longer lock-periods to ensure aligned network economics.	0.040 MATIC	5% of contribution
Round 3		0.067 MATIC	No Incentive

* Price may vary at the time of launch
